

ABSTRACT OF THE DISCLOSURE

5 An apparatus comprising a drive server, a control server  
and one or more decoder devices. The drive server may be  
configured to present one or more DVD data streams in response to  
one or more input signals. The control server may be configured to  
10 present one or more compressed data streams in response to the one  
or more data streams and one or more request signals. The decoders  
may be configured to present a decoded video signal and a decoded  
audio signal in response to one of the compressed data streams and  
the request signals. The navigation software, which traditionally  
is processed local to the decoder, may be processed on the control  
server. The control server may be enabled to control the remote  
decoder.
